The Light Tower is an inflatable, semi-transparent tube with a sodium light

Inflatable lighting tower

The Light Tower is a portable outdoor light which can be used in a variety of settings. It consists of an adjustable semi-transparent tube which can inflate in 60 seconds using a built-in fan. A 600W sodium lamp sits at the top of the 5m tower.

The Light Tower's semi-transparent material helps diffuse the light, so it is

softer, with fewer shadows. The tower can withstand wind gusts of 70km/h with the help of tension ropes.

Where mains electricity is not available, it can be powered by a generator.

The Light Tower is available in a low-frame and high-frame model that fits a generator.
